

Full Description Report - Dataset

Parks and Conservation Reserves (PARKRES)

Title:	Parks and Conservation Reserves (PARKRES)
Metadata ID:	51d86fdf-8a29-5e09-904f-855319faf2d8
Resource Name:	PARKRES
Publication Date:	30-07-2026
Spatial Extent:	
Owner:	
Custodian:	Department of Energy, Environment and Climate Action
Data access:	Unclassified
Jurisdiction:	Victoria
Abstract:	Areas under the National Parks Act 1975, conservation reserves and metropolitan open space parks under the policy control of the Land Management Branch. This dataset replaced PK_PARKRES in April 2013.

Purpose:

PARKRES is a spatial representation of the Parks and Reserves Information Management System (PRIMS). This database lists Parks and Conservation Reserves under the policy control of the DELWP Land Management Policy Branch. These include areas scheduled under the National Parks Act 1975, Nature Conservation Reserves, Natural Features Reserves, Regional Parks, Phillip Island Nature Park, Historic & Cultural Features Reserves, and Metropolitan Open Space Parks. Many of these areas are managed by Parks Victoria under a management agreement between the Minister for Environment and the Parks Victoria Board. PRIMS and PARKRES define the areas covered by this agreement.

This spatial dataset is updated quarterly, so it is a snapshot of what is in the parks and reserves system at that time. For more up-to-date information about a park or reserve refer to PRIMS. In November 2019 PRIMS was replaced by Landfolio. PARKRES reflects the information represented in Landfolio.

Data Currency Information:

Data Set Status:

Completed

Data Collection:

Collection Period:

2013-04-10 - Now

Update Frequency:

Continual

Dataset Information:

Dataset Source:

Dataset Source: Text attributes are sourced from Landfolio (previously PRIMS).

Polygons are derived from Vicmap parcels, National Parks Act 1975 certified plans, additional mapping based on 1:25,000 topography and PLM25.

Refer to metadata for PLM25 and VMPROP_PARCEL_CROWN_APPROVED.

Dataset Originality: Primary & Derived

Collection Method: Refer to metadata for PLM25 and VMPROP_PARCEL_CROWN_APPROVED

Dataset Processing Details:

<apiError><code>runtime_exception</code><description>A sequence of more than one item is not allowed as the first argument of normalize-space() ("", "") </description><message>XPathException</message></apiError>

Positional Accuracy:

Polygons are derived from multiple sources: - Vicmap parcels (1:2,500 - 1:25,000) - Digital certified plan boundaries for areas recently scheduled under the National Parks Act 1975 at (1:25,000) - Boundaries digitised by the Land Management Policy Branch (based on 1:25,000 topography) - PLM25 (1:25,000)

Attribute Accuracy:

Text attributes are derived from Landfolio (previously from Parks and Reserves Information Management System (PRIMS) database). Boundary information in this dataset has been extensively validated against detailed plans of LCC/ECC recommendations, parish plans, parcel based VEAC recommendations, VEACRECS25, and the Land Information Management System (LIMS). The link between LIMS and PRIMS is maintained manually and may not contain the most recently created or deleted parcel records. Validation of the land manager attribute is continuing. This dataset does not provide definitive boundaries for areas scheduled under the National Parks Act 1975. Polygons in this layer should be used in conjunction with boundary descriptions on the corresponding certified (legal) plan. These are listed in the Act and are available from the Landata web site from the Central Plan Office.

Logical Consistency:

Polygon attributes are restricted to those codes that are contained within the relevant lookup tables for each attribute. Logical Consistency checks at the source data level (PLM25, VicMap parcels, PRIMS database) have been developed to appropriately maintain the data.

Completeness:

Statewide. All primary management records from PRIMS are represented. Statutory management overlays such as Reference Areas, Wilderness Zones, Remote & Natural Areas, Heritage Rivers and Natural Catchment Areas are found in the PLM25_OVERLAYS dataset. Completeness Verification: Area comparisons between the PRIMS source data and the PARKRES layer have been conducted as well as a comprehensive visual inspection.

Further Information:

Supporting Documentation:

History: Refer to metadata for PLM25 and PK_PARKRES this datasets precursor.

Relationship to other Datasets: PLM25, VMPROP_PARCEL_CROWN_APPROVED, PRIMS (text based business application)

Current Design Issues: Polygons showing boundaries of areas scheduled under the National Parks Act 1975 are a guide only. The actual boundaries are defined by the linework and annotations on the certified (legal) plan, and by additional notes in the Act. The legal plans are available from the Landata web site from the Central Plan Office.

Use of this layer is currently limited to display, query and some spatial analysis work since the data does not have a persistent unique identifier. This is due to the complexity associated with sourcing the spatial data from a variety of sources. This should be taken into consideration by those intending to integrate PARKRES with applications and or building processes around it.
